**STEP BY STEP HOW TO BUY AND SELL KLT
THROUGH THE RECOMMENDED
DECENTRALIZED AND CENTRALIZED
PLATFORMS:**

BINANCE - METAMASK - PANCAKE SWAP

BUY:

1

Open a Centralized Exchange account, like Binance, KuCoin, Bitmart, etc.

2

Once your account is verified, buy BNB or USDT:
Buy Cryptos - Debit/Credit Card - BNB/USDT Option.

3

Download the extension called MetaMask:
<https://metamask.io>

4

Create an account in MetaMask
IMPORTANT: Write down the 12 keywords somewhere safe.

5

The main network of the MetaMask wallet is that of Ethereum, therefore the BSC must be added:

Network name: SmartChain

New RPC URL: <https://bsc-dataseed.binance.org/>

ChainID: 56

Symbol: BNB

Block Explorer URL: <https://bscscan.com>

6

In the Spot Wallet select the “Withdraw” option, choose BNB/USDT, select the Network BEP20 and then, in the address box: put the MetaMask wallet address (available at the top of MetaMask under the account name); then enter the amount of BNB and withdraw.

7

Once the withdrawal is processed, your BNB will arrive at MetaMask for a very low cost.

8

Go to <https://pancakeswap.finance/>

9

Connect the MetaMask wallet with Pancakeswap by pressing the blue button that says “Connect Wallet” in the upper right corner. The extension will open, and you must give permission.

10

Once the wallet is connected, go to the “Trade” index on the page and select “Swap”.

11

In the “Swap” box select the exchange currency BNB and the amount to invest.

12

When searching for the currency to exchange, put this address on the board:

0xf87940f78f2f4d99a0c5c22e3fcc21795cd53245 (KLT CONTRACT).

13

Select currency KLT (Kamaleont) check well the name of the currency.

14

In the “Swap” tab on the right select the configuration gear in the upper left corner and in the percentages of “Slippage Tolerance” write a percentage slightly greater than the sum of 9% + the % of “Price impact” that generate purchase.

A 13% “Slippage Tolerance” is generally used.

15

Make the swap, give the permissions and import the KLT TOKENS to the MetaMask wallet.

16

The KLT TOKENS will already be in your MetaMask account.

SELL:

1

Go to <https://pancakeswap.finance/>

2

Connect the MetaMask wallet with Pancakeswap by pressing the blue button that says “Connect Wallet” in the upper right corner. The extension will open and you must give permission.

3

Once the wallet is connected, go to the “Trade” index on the page and select “Swap”.

4

Configure the “Swap” box to exchange KLT for BN-B/USDT in the opposite way to how it was done in the purchase.

KLT CONTRACT: 0xf87940f78f2f4d99a0c5c22e3-fcc21795cd53245

5

In the “Swap” tab on the right select the configuration gear in the upper left corner and in the percentages of “Slippage Tolerance” write a percentage slightly greater than the sum of 9% + the % of “Price impact” that generates the sale.

A 13% “Slippage Tolerance” is generally used.

6

Make the swap, give the permissions and the BNB or USDT will already be in your MetaMask account.

7

Go to the Centralized Exchange wallet click on “Deposit”, select the currency (BNB or USDT, in the BEP20 network) and get wallet address.

8

In the MetaMask wallet, press “send” on the BNB or USDT and put the address obtained previously the Centralized Exchange, give confirmations and wait for the shipment.

9

Once with the BNB or USDT in the Centralized Exchange wallet they can be sold through P2P trading.

10

P2P trading connects you with verified merchants who buy your crypto and transfer the money directly to the account you specify. Everything is under the supervision of the Centralized Exchange, which otherwise has its own didactic tutorials that help to carry out the process.
